Individual Report

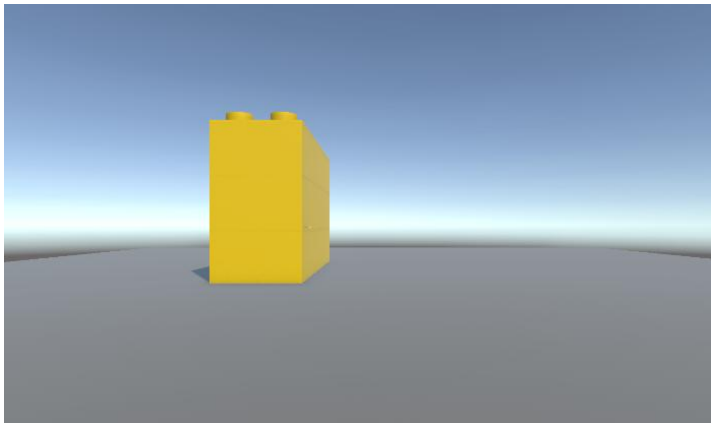

This is a reflective report on my role and experiences working on Coursework 1 with Group 8. Our group focused on spreading out roles instead of having specialised roles, this was so that if anyone was stuck on something, someone else could help them out instead of narrowly focusing on one aspect of the project. However, during the beginning of Coursework 1, the group was a bit confused on what the brief was asking, I took it upon myself to ask some questions for clarification and every meeting since then I would help guide the group towards a direction and remind the group that the project for CW 2 didn't have to all be finished in one go, and explained that CW1 was a showcase of collaborative effort and the foundation for CW2.

An example of how I would guide the group towards a direction was the tutorial implementation, there was confusion on how tutorials would be implemented and so I took a screenshot of tutorial segments and labelled them as so:

I then asked groupmates which segment they would like to do, and after that progress became smoother.

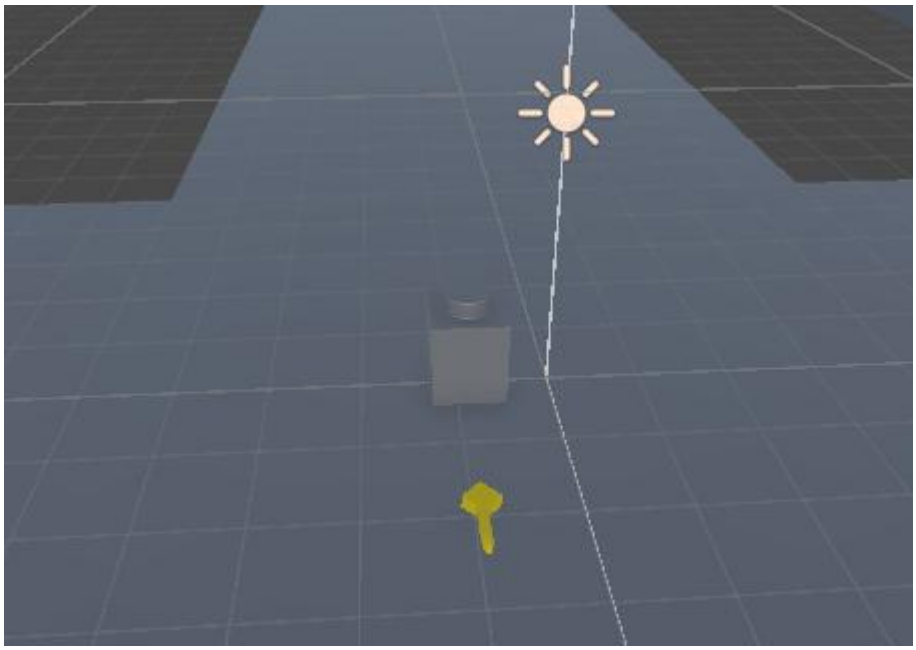

The tutorial I was assigned was the brick wall, and alongside this I implemented the mandatory lego minifigure animation deliverable as shown below:

Our idea for CW2 is to have a pizza delivery simulator. The user has to deliver pizza to the correct house in a certain amount of time to maximise points, and they have to avoid obstacles.

As for my contribution to the current CW2 foundation, I made a simple arrow that automatically points to the direction of the next building that the user has to drive to. This was done by having an empty object as the central pivot to the arrow model, and some simple code that points it to the transform of an object I can publicly assign to it, due to the simplicity of the code, I didn't need to use AI since it was only a few lines:

Overall, while I think I had decent contributions to the group during this coursework, I could have done more in terms of what we have planned for CW2. This is due to a myriad of personal issues that unfortunately arose at an inconvenient time, which made me out of touch with the current state of the project file. I could also have had better time management and should've communicated my disconnect with the project, which I look to improve in CW2.
